

THERM TECH ENGINEERING CO.

THERM TECH

Fact : Plot no. 48, Sector-57, Phase –IV, HSIIDC, Kundli, Dist.- Sonapat, Haryana

Office : BH-290, East Shalimar Bagh, Delhi-110088

M : 9958063334, 9136583299, mail: thermtecheng@gmail.com

Website : <https://thermtecheng.com>

Therm Tech Burner

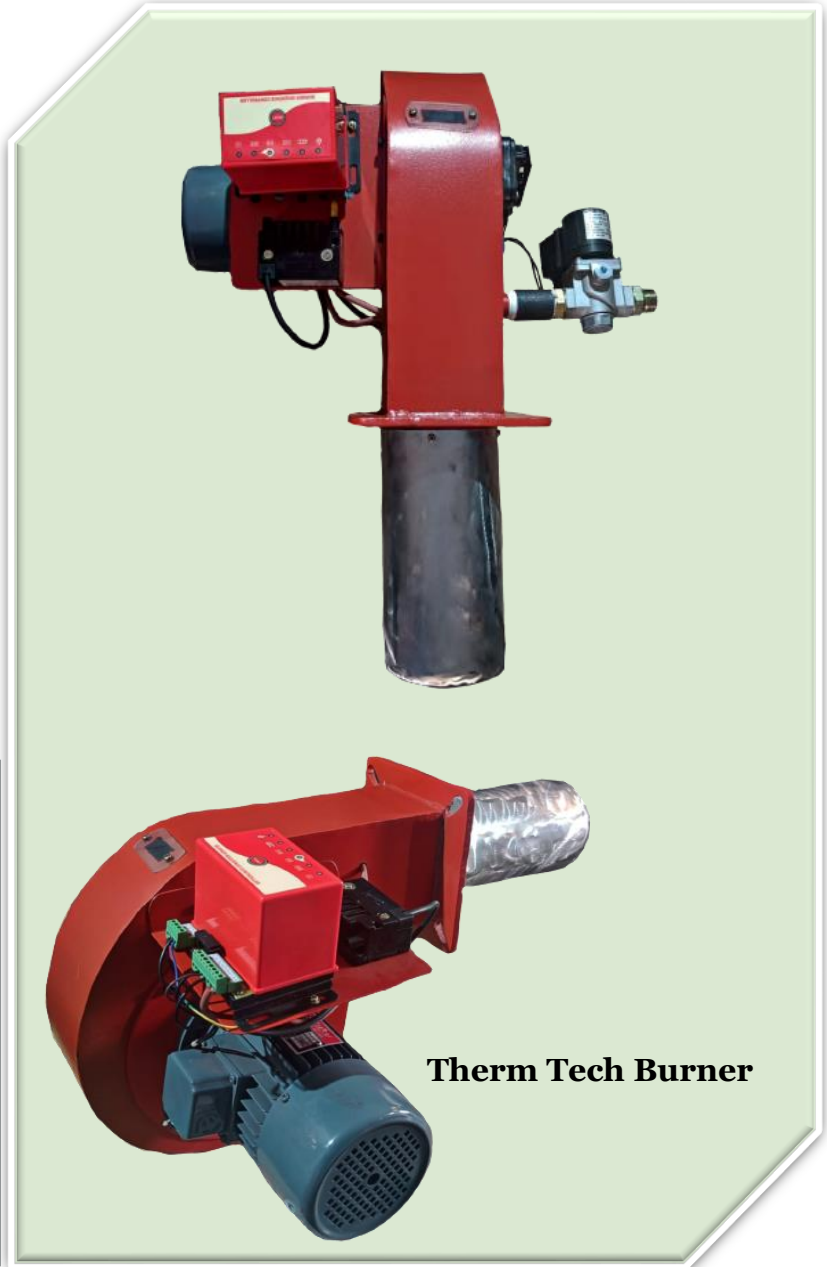

Therm-Tech Burner is a mechanical device that mixes fuel and air together and, using an ignition device, provides a platform for combustion.

Burners are devices used to mix fuel and air (oxygen) to achieve controlled combustion while producing a specific flame and heat-release pattern. The heat generated is used to control the temperature within a combustion chamber to the process set points.

The heat energy produced by the flame is transferred to the place where the energy is required by means of a combustion chamber. The burner motor is powered by electrical energy to operate the fan used to feed combustion air to the burner.

Advantages of Therm Tech Burner

- Compact
- Fast Response
- High Heat Release Rates
- Minimum Flame Extension
- Safe Operation
- Multi fuel Capability
- All-Metal Construction

Why choose us?

- ❖ Our industrial heaters promise high performances and are built using the latest technology.
- ❖ All our products are designed keeping in mind the customer's needs.
- ❖ Our heating units are built for high durability, less noise, maximum efficiency, and reliability.
- ❖ Our expert team strictly follows the total quality management.
