Therm Tech Cyclone

Therm Tech Cyclone separators are separation devices (dry scrubbers) that use the principle of inertia to remove particulate matter from flue gases. Cyclone separators is one of many air pollution control devices known as pre-cleaners since they generally remove larger pieces of particulate matter.

Cyclone dust collectors are a type of inertial separator that make use of centrifugal, gravitational, and-or inertial forces that separate dust from the airstream. The dust and particle-laden air or gas enters the cylindrical chamber tangentially at one or more points and leaves through a central opening.

Advantages of Therm Tech Cyclone

- Low capital cost.
- Ability to operate at high temperatures.
- Can handle liquid mists or dry materials.
- Low maintenance requirements (no moving parts).
- Small footprint - requires relatively small space.

Therm Tech Cyclone

Why choose us?

- ❖ Our industrial heaters promise high performances and are built using the latest technology.
- ❖ All our products are designed keeping in mind the customer's needs.
- ❖ Our heating units are built for high durability, less noise, maximum efficiency, and reliability.
- ❖ Our expert team strictly follows the total quality management.
